PRESSURE/TEMPERATURE LIMITATIONS OF SEAT SEAL

The pressure-temperature rating of soft-seated ball valves bolted - construction is determined by:

- 1 Type of material group N° used for valve body
- 2 Type of material group N° used for body bolts
- 3 Type of sealing material used for seal and seats

Where:

A For material group N° we refer to ASME/ANSI B16.34 (stress-dimensions - thickness - etc.)

B For seats material we have prepared general pressure-temperature chart (at full differential pressure) based upon our experiences both in the field and in our laboratory.

SOME SPECIAL SERVICE BALL VALVES

- 1 OXYGEN GAS** - Valves tested using dry nitrogen gas. All valves are solvent cleaned and individually sealed in a polyethylene bag to prevent contamination: 316 TT.
- 2 DRY, LIQUID AND GASEOUS CHLORINE** - Valves tested using dry nitrogen gas. All valves are specially cleaned and individually sealed in a polyethylene bag. A supplementary venting hole on the ball.
- 3 CRYOGENIC SERVICE - HELIUM LEAK TEST** - Valves are dry tested. All valves are cleaned and individually sealed in a polyethylene bag. Extended stem and supplementary venting hole on the ball. For low class use T seats, medium class S seats, for class 900 and up K seats.
- 4 VACUUM** - Until 10⁻¹ torr can use all type of starting valves. For high vacuum consult factory.
- 5 Phenol at low temperature** - Liquid asphalt - Steam jacket valves.
- 6 ALIMENTARY - FOOD SERVICE** - Valve cleaned, polished and cavity filled.
- 7 SLURRY SERVICE** - Cavity filled.
- 8 ABRASIVE MEDIA** - Metal to metal seats.
- 9 HIGH TEMPERATURE** - Metal to metal seats.
- 10 NACE** (sour oil and gas) H₂S. All Starline FIRE SAFE valves types meet the requirements as a standard class 3. For class 2 and 1 must be selected proper bolts like B7M - L7M - B8M.
- 11 HYDROGEN PEROXIDE - NITROGEN LEAK TEST** - Valves are dry tested. All valves are cleaned. Supplementary venting hole.

FLOW DATA

The following flow rates were determined for ball valves in fully open position and a water temperature of 60°F (15°C). Kv value is the full capacity flow rate through the ball valve in cubic metres per hour (m³/h) with a pressure drop of 1 bar. Cv value is the full capacity flow rate through the ball valve in gallons/min. of water at 60°F with a pressure drop of 1 psi.

HOW TO TRANSFORM A MANUAL OPERATED VALVE IN AUTOMATED VALVES

- 1) Take out the handle nut
- 2) Take out the handle
- 3) For size: 1/4" - 3/8" - 1/2" F.B. or 1/2" - 3/4" R.B. handle nut is not to be fitted For bigger sizes the handle nut has to be fitted

 - CONVERSION FACTORS: 1Nm = 0,7376 Lb-in / 1 lb.ft. = 1.365 Nm / 1 Nm = 8,86 Lb-in

It must be understood that many factors can influence the torque of ball valves in field service. For this reason to SELECT PROPER ACTUATOR it must be used the "TORQUE ADJUSTMENT FACTORS" table no. A003/94.

General Remarks:

- 1) The above actuators have been selected considering an air supply of 80 psi or 5,6 bar.
- 2) On spring return actuators the N. of spring per side is 5.
- 3) For different air supply please see Air Torque Catalogue.
- 4) Bracket and adaptor are dimensioned to fit Air Torque actuators.
- 5) When air supply for actuator is lower than 5,6 bar bigger actuator must be selected and bracket plus adaptor become special
